Baking Helps

Learn to Regulate the Heat of Your Oven

By Mrs. Janet McKenzle Hill, Editor of the Boston Cooking School Magazine

There is just one way to make your cakes rise high and keep an even surface. Have your even moderate at first, until the cake is fully rizen; then increase the heat, so as to brown it over quickly. Extreme heat stiffens the dough, If you stiffen the outside of the cake before the rising is complete, you stop the rising process. Then the leavening gas, forming inside, will bulge up the center, where the dough is still soft, and spoil the shape of the cake.

made from stall dough, that are cut into shapes for the oven, bake in a hot even, This is because the cut surfaces of the dough do not year over, but rather leave the nores open, allowing the leavening gas to escape and the heat to renerrate readily. Small evens cool the better. Do not attempt to take bread and postry foresther. Bread requires protonged, moderate baking-

Recipe-

For scrubbing floors, lineleums and woodwork dissolve a tablespoonful of Gold Dust in a pail of hot water

In millions of homes Gold Dust is used every day, because it abolishes rubbing and scrubbing.

Gold Dust—the active cleaner - dissolves quickly in hot or cold water, forming an active, antiseptic cleaning solution which will not scratch nor mar the finest polished surface.

Its activity begins the moment it is applied to any article that requires cleaning.

Use it for cleaning floors, linoleum, china. Also for cleaning porcelain, kitchen utensils, silver, enameled and plated ware, woodwork, windows and bathroom fixtures.

You will find simple directions printed on every package of Gold Dust.

It is inexpensive and indispensable.
